This pocket-sized, illustrated guide covers every significant make and model of car sold in Europe and North America during the 2006-2007 model year, from giants like Ford and VW to small-scale manufacturers such as Morgan and Noble. Each model is pictured in color, with a data table providing vital statistics to enable comparisons between models. Providing full details for over 700 cars and stretching to 400 pages, this is a must-have reference source and a useful "spotter's guide" for all car enthusiasts.

Automotive Steering and Suspension, published as part of the CDX Master Automotive Technician Series, arms students with the basic knowledge and skills they need to accomplish a variety of tasks in the shop. Taking a "strategy-based diagnostics" approach, this book helps students master technical trouble-shooting in order to address the problem correctly on the first attempt.

The PC revolution, the advent of PDAs, and growth in the use of wireless LANs have changed the way we live our lives. Next on the horizon is the application of new technologies that will change the way we drive our cars. De rigeur for many drivers, electronic passes and GPS systems represent the tip of the iceberg in terms of emerging applications

The public health risks posed by automotive particulate emissions are well known. Such particles are sufficiently small to reach the deepest regions of the lungs; and moreover act as carriers for many potentially toxic substances. Historically, diesel engines have been singled out in this regard, but recent research shows the need to consider particulate emissions from gasoline engines as well. Already implicated in more than one respiratory disease, the strongest evidence in recent times points to particle-mediated cardiovascular disorders (strokes and heart attacks). Accordingly, legislation limiting particulate emissions is becoming increasingly stringent, placing great pressure on the automotive industry to produce cleaner vehicles - pressure only heightened by the ever-increasing number of cars on our roads. Particulate Emissions from Vehicles addresses a field of increased international interest and research activity; discusses the impact of new legislation globally on the automotive industry; and explains new ways of measuring particle size, number and composition that are currently under

development. The expert analysis and summary of the state-of-the-art, which encompasses the key areas of combustion performance, measurement techniques and toxicology, will appeal to R&D practitioners and engineers working in the automotive industry and related mechanical fields, as well as postgraduate students and researchers of engine technology, air pollution and life/ environmental science. The public health aspects will also appeal to the biomedical research community.

Jeremy Clarkson is once more Driven to Distraction. Brace yourself. Clarkson's back. And he'd like to tell you what he thinks about some of the most awe-inspiring, earth-shatteringly fast and jaw-droppingly cool cars in the world (oh, and a few irredeemable disasters...). Or he would if he could just get one or two things off his chest first. Matters such as: * The prospect of having Terry Wogan as president * Why you'll never see a woman driving a Lexus * The unforeseen consequences of inadequate birth control * Why everyone should spend a weekend with a digger Driven to Distraction is Jeremy Clarkson at full throttle. So buckle up, sit tight and enjoy the ride. You're in for a hell of a lot of laughs. Praise for Jeremy Clarkson: 'Brilliant . . . laugh-out-loud' Daily Telegraph 'Outrageously funny . . . will have you in stitches' Time Out 'Very funny . . . I cracked up laughing on the tube' Evening Standard

Im Jahr 2010 wurden weltweit rund 78 Mio. Kraftfahrzeuge produziert, die Gesamtproduktion von Kraftfahrzeugen in Deutschland belief sich auf fast 6 Mio. Einheiten. Damit beträgt der Anteil der Automobilindustrie am Gesamtumsatz der Industrie in Deutschland etwa 21%. Circa 750.000 Personen sind derzeit direkt in der Automobilbranche beschäftigt. Insgesamt betrachtet, hängen sogar rund 5,3 Mio. Arbeitsplätze in Deutschland in irgendeiner Form vom Automobil ab. Diese Zahlen belegen die wirtschaftliche Bedeutung der Automobilindustrie und damit wird klar, dass unternehmerische Fehlentscheidungen in diesem Industriezweig weitreichende Folgen haben können. Vor allem die Möglichkeit, die Flop-Risiken in der Automobilindustrie sehr praxisnah untersuchen zu können, brachte mich zu der Wahl dieses Untersuchungsthemas.
