"Good design is as little design as possible." — Dieter Rams. Dieter Rams is famous for

changing the world of consumer electronics, by proving that mass produced items can – and should – be thoughtfully designed. In his Ten Principles of Good Design he outlined the commandments designers should obey to produce better products. Each principle is easy to agree with, but one that has really stuck out to me recently has been number ten: “Good design is as little design as possible.”

"Indifference towards people and the reality in which they live is actually the one and only cardinal sin in design" – Dieter Rams. Dieter Rams' life and work are indelibly linked to his thoughts about how people live, and how they can live better. Products he designed in the 1960s are still being produced and sold today – only one demonstration of the strength of his work. This comprehensive monograph covers both Rams' life and his work, as well as his ideas on good design, which continue to inspire designers and consumers today. A personal foreword by Jonathan Ive evokes the influence that Rams has had on his own work and, by extension, the objects with which so many of us share our everyday lives. An introduction and an essay by Klaus Kemp tell the story of Rams' early life, his training as an architect, and the intellectual context in which his ideas were developed. The next four chapters examine Rams' work and his life – which are more or less synonymous – in depth. This includes his role at

Braun as well as the work he did for the furniture company Vitsoe. Each chapter includes sketches, prototypes, finished products and the marketing for those products, giving a complete picture of Rams' work and its context. Two other chapters in this section present Rams' own house, the only work of architecture that he completed, and examine the products he designed at the level of detail, a crucial aspect to his work. A further chapter examines Rams' "ten commandments" of good design and his credo, "less but better", in the context of his role as head of design at Braun, and a final chapter explores his legacy in the work of contemporary designers including Naoto Fukasawa, Jonathan Ive, Sam Hecht, and Konstantin Grcic. This beautifully designed book includes a wide variety of visual material, including sketches and technical drawings, photographs of Rams' work as well as his life, archival material from both Braun and Vitsoe, Ingeborg Rams' subtle photographs and Vitsoe's playful graphic design and advertising. This book will appeal not only to fans of Dieter Rams' work, but to everyone drawn to the message behind his "ten commandments" of good design – which are really ideas about how we can all live better and more sustainable lives. "

Conditional design is the sequel to Operative Design. This book will further explore the operative in a more detailed, intentional, and perhaps functional manner. Spatially, the conditional is the result of the operative. It is not a blind result however. Both terms work together to satisfy a formal manipulation through a set of opportunities for elements such as connections and apertures.

Letters to Architects presents letters addressed to architects practicing throughout the world, many of them contemporaries with Frank Lloyd Wright during the first half of the twentieth century. Taken as a whole, this selection of letters aims at revealing an underlying unity of purpose: the growth of his work and the unquestionable magnitude of influence it engendered in the world of architecture. The letters are organized into five sections. Section One presents the first publication ever to be made of the letters between Frank Lloyd Wright and Louis H. Sullivan. Section Two traces Wright's concern, through letters addressed to both European and American architects, that his work be understood as the cornerstone of an American Culture. In Section Three, correspondence has been selected to include three specific persons: Henry-Russell Hitchcock, Lewis Mumford, and Howard Myers. These men offered Wright a special forum from which he could speak to the profession as a whole, most particularly through the medium of publication. Section Four narrates, by means of letters to various architects concerned with the assembling and exhibition of the largest one man architectural exhibition ever to be produced, the details, trials, problems, and results of such a large undertaking. Section Five recounts the honors bestowed on Frank Lloyd Wright first in England, in 1941, and then in his own country, in 1949. It shows his concern for the profession of architecture in the moving address he gave at the occasion of his receiving the Gold Medal from the American Institute of Architects.

"The bestselling author of Inside Steve's Brain profiles Apple's legendary chief designer, Jonathan Ive. Jony Ive's designs have not only made Apple one of the most valuable companies in the world; they've overturned entire industries, from music and mobile phones to PCs and tablets. But for someone who has changed the world as much as he has, little is widely known about Apple's senior vice president of industrial design. Unlike his former boss and creative partner Steve Jobs, Ive shuns the spotlight. Naturally shy and soft-spoken, he lets his work speak for itself and concerns himself only with his craft"--

Intelligent readers who want to build their own embedded computer systems-- installed in everything from cell phones to cars to handheld organizers to refrigerators-- will find this book

to be the most in-depth, practical, and up-to-date guide on the market. Designing Embedded Hardware carefully steers between the practical and philosophical aspects, so developers can both create their own devices and gadgets and customize and extend off-the-shelf systems. There are hundreds of books to choose from if you need to learn programming, but only a few are available if you want to learn to create hardware. Designing Embedded Hardware provides software and hardware engineers with no prior experience in embedded systems with the necessary conceptual and design building blocks to understand the architectures of embedded systems. Written to provide the depth of coverage and real-world examples developers need, Designing Embedded Hardware also provides a road-map to the pitfalls and traps to avoid in designing embedded systems. Designing Embedded Hardware covers such essential topics as: The principles of developing computer hardware Core hardware designs Assembly language concepts Parallel I/O Analog-digital conversion Timers (internal and external) UART Serial Peripheral Interface Inter-Integrated Circuit Bus Controller Area Network (CAN) Data Converter Interface (DCI) Low-power operation This invaluable and eminently useful book gives you the practical tools and skills to develop, build, and program your own application-specific computers.

The first biography of the epic life of one of the most important, enigmatic and private artists of the 20th century. Drawn from almost 40 years of conversations with the artist, letters and papers, it is a major work written by a well-known British art critic. Lucian Freud (1922-2011) is one of the most influential figurative painters of the 20th century. His paintings are in every major museum and many private collections here and abroad. William Feaver's daily calls from 1973 until Freud died in 2011, as well as interviews with family and friends were crucial sources for this book. Freud had ferocious energy, worked day and night but his circle was broad including not just other well-known artists but writers, bluebloods, royals in England and Europe, drag queens, fashion models gamblers, bookies and gangsters like the Kray twins. Fierce, rebellious, charismatic, extremely guarded about his life, he was witty, mischievous and a womanizer. This brilliantly researched book begins with the Freuds' life in Berlin, the rise of Hitler and the family's escape to London in 1933 when Lucian was 10. Sigmund Freud was his grandfather and Ernst, his father was an architect. In London in his twenties, his first solo show was in 1944 at the Lefevre Gallery. Around this time, Stephen Spender introduced him to Virginia Woolf; at night he was taking Pauline Tennant to the Gargoyle Club, owned by her father and frequented by Dylan Thomas; he was also meeting Sonia Orwell, Cecil Beaton, Auden, Patrick Leigh-Fermor and the Aly Khan, and his muse was a married femme fatale, 13 years older, Lorna Wishart. But it was Francis Bacon who would become his most important influence and the painters Frank Auerbach and David Hockney, close friends. This is an extremely intimate, lively and rich portrait of the artist, full of gossip and stories recounted by Freud to Feaver about people, encounters, and work. Freud's art was his life—"my work is purely autobiographical"—and he usually painted only family, friends, lovers, children, though there were exceptions like the famous small portrait of the Queen. With his later portraits, the subjects were often nude, names were never given and sittings could take up to 16 months, each session lasting five hours but subjects were rarely bored as Freud was a great raconteur and mimic. This book is a major achievement, a tour de force that reveals the details of the life and innermost thoughts of the greatest portrait painter of our time. Volume I has 41 black and white integrated images, and 2 eight-page color inserts.

shows how the techniques and strategies of design belong at every level of business. Change by Design is not a book by designers for designers; this is a book for creative leaders who seek to infuse design thinking into every level of an organization, product, or service to drive new alternatives for business and society.

Braun products have been shown more frequently at exhibitions than those of any other comparable company. Some people find that they reflect basic human values such as authenticity and integrity. For others, they are the very incarnation of German perfectionism. Braun is not merely a trademark; it stands for an all-encompassing concept. For the last five decades, this concept has spawned innovative products with an unprecedented regularity that begs to be explained -- especially as the era spanned by the history of Braun design is not exactly one characterised by continuity. Instead, the second half of the 20th century witnessed a dramatic change in living conditions. Prosperity and greater ease entered our daily lives, but also widespread disorientation and alienation. It is to the credit of those who set the Braun design project in motion that they were able to counteract this feeling of alienation -- which manifested itself to them not least in poorly designed objects of daily use -- with a vision of design reform. There had already been attempts made along these lines. What was new was that a commercial enterprise spearheaded the movement. Also new was the systematic approach, the application of design principles to modern products and the innovative dynamic thus triggered. Finally, the considerable commercial success this design project enjoyed was likewise a revelation. All of this led the company to establish a design department that was not merely an appendage, but rather an active decision-maker in the development of products from the initial idea to realisation. This is how Braun and design became synonymous.
