A state may have one or more sorting districts depending on the volumes of mail handled. The fourth digit represents the route on which a delivery office is located in the sorting district.

A presentation of the basic models of the most important economic agents (households, firms, the banking system etc.). The influence of ethics on the decisions of persons is discussed within the context of mutual influences of one person on another. It is shown that this leads to a Markov chain which converges to a final situation which in many cases is independent of the initial conditions. The book helps the reader to understand the interdependence of humanities and economics and how to model this interdependence in economics.

The book provides a collection of interesting analytical views on contemporaneous issues of development and international economics such as globalization, brain drain toward developed countries, the European business cycle ' s impact on African economies, the importance of capital maintenance for growth, and so on. The research results provided by the authors, of whom several are — or have been — members of the Acad é mie Louvain, can be used as starting points for further development of the various covered fields. The book turns out to be a " value-added " contribution to economic literature advances and a remarkable opportunity to honor the memory of Michel Norro, who had a long-lasting career in teaching international economics and critiquing development policies, with a special focus on those which affect African economies. People interested in African economy analysis have inherited his valuable book É conomies africaines.

This title provides a comprehensive overview of the development and design of the European Monetary Union, as well as an intriguing discussion of its prospects for future enlargement.

Revised and updated for the 2nd edition, this textbook guides the reader towards various aspects of growth and international trade in a Diamond-type overlapping generations framework. Using the same model type throughout the book, timely topics such as growth with bubbles, robots and involuntary unemployment, financial integration and house price dynamics, policies to mitigate climate change and the persistence of religion in a globalized market economy are explored. The first part starts from the " old " growth theory and bridges to the " new " growth theory (including R&D and human capital approaches). The second part presents an intertemporal equilibrium theory of inter- and intra-sectoral trade, investigates innovation, growth and trade and limits to public debt as well as nationally and internationally optimal climate policies. The debt dynamics of the Euro Zone and the origins of intra-EMU and Asian-US trade imbalances are also explored. The book is primarily addressed to upper undergraduate and graduate students wishing to proceed to the analytically more demanding journal literature.

IS-LM is perhaps the prime example of 'cognitive dissonance' in economics, and is problematic to many economists. On the one hand, the IS-LM model is still taught by many academic economists or they use it to derive the AD-AS approach. On the other hand, the same economists realize the limitations of the basic IS-LM model and would not now use it for policy analysis, as they did in the past. The distinction between pedagogical and analytical efficacy is made by all the authors in this volume regarding the IS-LM model. Indeed, even those who would reject using the model for modern policy analysis still see the basic model as useful for teaching purposes. Moreover, in an augmented form, some of the authors in this volume would even see fit to use IS-LM for modern policy analysis. As will be seen, therefore, the IS-LM model is 'not yet dead'. Rather, the model's 'plasticity' has enabled it to undergo a metamorphosis into augmented form, enabling its continuing utilization in economics accordingly.

This text provides a comprehensive analysis of contemporary macroeconomics, within a European and global context. The authors balance the theoretical aspects with up-to-date policy examples throughout, allowing the reader to relate the concepts to their own economic environment.

The author investigates the strategies of eight publicly listed banks in Britain and Germany in the context of European financial integration. Evidence is provided that banks with defensive strategies fared better than those which attempted to break out of a coherent financial system in order to embrace new business opportunities
