Holt McDougal Modern Biology Chapter 32: Introduction to ...

Animals that reproduce asexually are called hermaphrodites. Some multicellular organisms can reproduce by both sexual and asexual reproduction. Organogenesis begins immediately after fertilization.

Holt McDougal Modern Biology Chapter 32: Introduction to ...

Animals are also eukaryotes because their cells contain a nucleus and organelles. Key to an introduction to animals is the distinction between vertebrate and invertebrate animals. Vertebrate animals are those that have an internal backbone such as humans, cats and dogs. An invertebrate is any animal that doesn't have an internal backbone.

the de? nition of biology possible bene? ts from studying biology characteristics of living things The Science of Life Biology is the science of life. In biology, you will learn the origins and history of life and once-living things. You will also learn structures, functions, and interactions of living things. What do biologists do?

Glencoe Science - SGA Biology

The suffix zoa refers to animals, as in a zoo. And the protozoa represents single-cell organisms. The metazoa represent multi-cellular organisms. And we're going to be focusing largely on the biology of metazoan cells this semester, and we're going to be spending almost no time on plants. It's not that plants aren't important.
