Technological and statistical advances, along with a strong interest in gathering more information about the state of our educational systems, have made it possible to assess more students, in more countries, more often, and in more subject domains. The Handbook of International Large-Scale Assessment: Background, Technical Issues, and Methods of Data Analysis brings together recognized scholars in the field of ILSA, behavioral statistics, and policy to develop a detailed guide that goes beyond database user manuals. After highlighting the importance of ILSA data to policy and research, the book reviews methodological aspects and features of the studies based on operational considerations, analytics, and reporting. The book then describes methods of interest to advanced graduate students, researchers, and policy analysts who have a good grounding in quantitative methods, but who are not necessarily quantitative methodologists. In addition, it provides a detailed exposition of the technical details behind these assessments, including the test design, the sampling framework, and estimation methods, with a focus on how these issues impact analysis choices.

*"Network Troubleshooting and Repair" covers what commonly breaks in video, multimedia, and data networks and how to implement repairs.

This volume explores the application of computer simulation technology to measurement issues in education -- especially as it pertains to problem based learning. Whereas most assessments related to problem solving are based on expensive and time consuming measures (i.e., think-aloud protocols or performance assessments that require extensive human rater scoring), this book relies on computerization of the major portion of the administration, scoring, and reporting of problem-solving assessments. It is appropriate for researchers, instructors and graduate students in educational assessment, educational technology, and educational psychology.

This state-of-the-art volume is a follow-up to the 1999 publication, Stuttering Research and Practice: Bridging the Gap, edited by Nan Ratner and E. Charles Healey. Like its predecessor, the current book is an edited collection of the presentations from the American Speech-Language-Hearing Association's Annual Leadership Conference in Fluency and Fluency Disorders. Among the topics covered are evidence-based practice, impact of the self-help and support groups, meta-analyses of selected assessment and intervention programs, current theories of stuttering, and the predicted path of stuttering intervention in the future. The authoritative representation of contributors offers the reader the most up to date presentation of fluency issues, with a special emphasis placed on the practical clinical implications of fluency assessment, treatment, and evolving theories of the disorder. The book is written for fluency specialists and graduate students in programs of fluency disorders. It will also be valuable for the clinicians who wish to upgrade their skills in treating fluency disorders.

This is the fifth edited volume of refereed contributions, from an international group of researchers and specialists. Volumes Five and Six comprise the edited proceedings of the third international conference on Engineering Psychology Cognitive Ergonomics, organized by Cranfield College of Aeronautics, Edinburgh, Scotland in October 2000. Volume Five concentrates on applications in the areas of transportation, medical ergonomics and training. Topics addressed include: the design of control and display systems; human perception, error, reliability, information processing, and performance modelling; mental workload; stress; automation; situation awareness; skill acquisition and retention; techniques for evaluating human-machine systems and the physiological correlates of performance. Both volumes will be useful to applied and occupational psychologists, instructors, instructional developers, equipment and system designers, researchers, government regulatory personnel, human resource managers and selection specialists; also to senior pilots, air traffic control and aviation and ground transportation operations management.

This book was written to address the need for timely, thorough, practical, and defensible job analysis for HR managers. Under continuing development over the past 50 years, Functional Job Analysis (FJA) is acknowledged by major texts in HR and industrial/organizational psychology as one of the premier methods of job analysis used by leading-edge organizations in the private and public sectors. It is unique among job analysis methods in having its own in-depth theoretical grounding within a systems framework. In addition to providing a methodology for analyzing jobs, it offers a rich model and vocabulary for communicating about the competencies (skills) contributing to work success and about the design of the work organization through which those competencies are expressed. FJA is the right theory and methodology for future work in an increasingly competitive global economy. This book is the authoritative source describing how FJA can encourage and support an ongoing dialogue between workers and management as they jointly pursue total quality, worker growth, and organization performance. It is a flexible tool, fully recognizing the rapid changes impacting today's organizations. It is a comprehensive tool, leading to an in-depth understanding of work, its results, and its improvement in a unique organization context. It is a humane tool, viewing workers in light of their full potential and capacity for positive growth. With FJA, workers and managers can work more constructively together in a wholesome and productive work relationship.
