What is Population Imbalance | IGI Global

The latest medium UN projections see the current global population of 7.4bn rising to 8.5bn by 2030, 9.7bn by 2050 and over 11bn by 2100. Overall, with better use of food and land, this is thought possible. However, regionally the numbers and speed of increase vary considerably. In Europe, the natural population is actually set to decline.

File Type PDF The Population Imbalance As A *Imbalanced Population Growth - Future Agenda*

By 2030, the world's population is estimated to reach 8.5 billion, while getting older and increasingly urban. Change will be uneven across regions, with rapid population growth in many still-developing economies, while stalled – or even shrinking – population numbers are expected in many developed countries.

Many of the underlying reasons for the demographic imbalance are linked to the perception that growth equals progress and prosperity, 95 regardless of whether it yields returns for the national population. While foreign direct investment and labor imports may bring knowledge transfer and sustainable business, a lot of the marginal activities only serve the increasing foreign population and have no tangible positive impact on the national cohort.
